Brake Board Upgrade

Upgrade Bulletin

MEGTEC Systems choose the Siemens S7-300 series CPU as the platform to replace the existing analog brake controller that was originally provided on the BAT splicers. A custom brake control loop ensures optimum tension control across a wide range of tensions and roll weights.

New features with upgrade:

- ➔ Current technology
- ➔ Improved reliability
- ➔ Remote troubleshooting
- ➔ Simplified set-up

The kit includes:

- ➔ Siemens power supply
- ➔ Siemens CPU
- ➔ Valve amplifiers
- ➔ Updated schematics
- ➔ Installation instructions
- ➔ PLC Program

***In order to help us offer you the correct upgrade kit for your machine, please supply the following information: Machine type • Serial number • Manufacturing year**

For further information, availability, please contact your nearest MEGTEC office by visiting www.megtec.com and click on parts and upgrades or email to info@megtec.com.
